WORK EXPERIENCE

Full Stack Java Developer

Rabbit & Tortoise Technology Solutions, Kharadi

05/2022 - Present

Pune

Role/Responsibilities

- Developed robust Java web applications and suitable data structures and algorithms, leveraging the Spring MVC & BOOT framework.
- Worked closely with interdisciplinary teams to collect requirements and execute software solutions.
- Developed and executed database schemas using SQL, including tasks related to data migration.
- Developed responsive and interactive user interfaces with React.js, incorporating state management libraries like Redux to handle complex application states and ensure smooth user experiences.
- Engaged in code reviews and conducted unit testing and debugging to ensure software quality and reliability.
- Led to enhance the application performance and address production issues.
- Committing, deploying & maintaining applications on a cloud server.
- Continuously staying abreast of industry trends and emerging technologies to enhance skills and knowledge proactively.
- Conducting interviews and providing training to new interns.

COMPANY PROJECTS

CRM (07/2023 - Present)

- I leveraged my CRM expertise to craft a user-friendly interface for managing customer interactions and data. I led to key functionalities, including lead and opportunity tracking, contact management, and reporting. I demonstrated strong Java skills in API integration in React, API development, and web application security.

LARA (12/2022 - Present)

- The LARA insurance project facilitates seamless communication between Hanover Company and local government bodies, enhancing coordination on insurance-related affairs. Employing rigorous design patterns and architectural principles, the application ensures modularity, scalability, and maintainability for optimal performance in evolving operational landscapes.

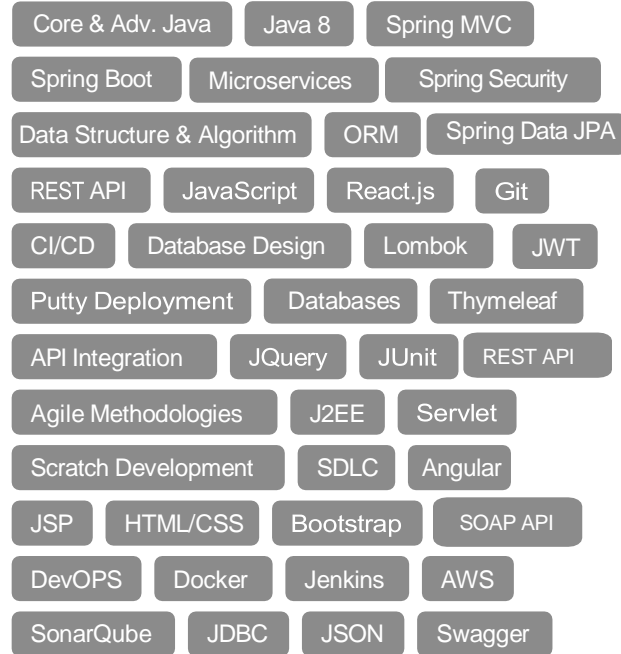

TLMS Application (05/2022 – 12/2022)

- Led the development of TLMS, a web platform enabling efficient tracking and management of testing activities for teams. It streamlines data ingestion from users, ensuring accurate monitoring throughout the testing lifecycle.
